NAYAK DEEPTHI
(IAPISCS005)

I Imagine If Trees Gave Off Hot Gases, The World Be Burning So Many Trees And The World Destroyed. So Go Green And Save The Environment

PREPARING AND TAKING ONLINE TEST EXISTING SYSTEM

ABSTRACT

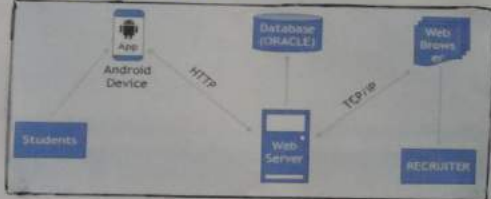

- Nowadays online test has the greater importance than hand-written test.
- Let's focus on the placement drives of colleges or educational institutes as there is more importance for that.
- Usually placement activity takes place through 3-4 rounds i.e., Online Aptitude round, GD, Technical Interview and HR Interview.
- In this process there is a problem of shortage of systems. All the students can't take the test at once. So they made to divide as batches and go further. So it will be time consuming also.
- Considering the above scenario, as we know android phones are integral part of our daily life and almost all students possess android phones. So we come up with the idea of taking online tests using mobile phones only. i.e., we connect our mobile having desired application with the company server and then we can take test and we can also add more features to it. So it can effectively solves the time.
